DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 18, 2007 has been entered.

Response to Amendment

This office action is in response to amendment filed on October 18, 2007. Original application contained Claims 1-42. Applicant previously amended Claims 1, 2, 22, and 23. Applicant currently amended Claims 1, 22, cancelled Claims 2-6, 8-21, 23-27, and 29-42. The amendment filed on October 18, 2007 have been entered and made of record. Presently pending claims are 1, 7, 22, and 28.

Response to Arguments

Applicant's arguments with respect to claims 1, 7, 22, and 28 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1, 7, 22, and 28 are rejected under 35 U.S.C. 102(e) as being anticipated by Bork et al. U. S. Patent 6,633,932.

2. Regarding claim 1 Bork teach and describe a system and method for at least one of charging and powering a personal digital assistant device, the method comprising: connecting the personal digital assistant to a computer comprising a universal serial bus hub driver, the personal digital assistant connected to the computer using a connector comprising a cable having a universal serial bus compliant plug and port combination, wherein software installed in the peripheral device personal digital assistant is configured to represent the personal digital assistant to the computer as a hub instead of as a personal digital assistant to draw that enables the peripheral device to be at least one of charged and powered b~ from the a computer by sending a first signal to the computer, and wherein the software is configured to represent the personal digital assistant to the computer as the hub being connected to one peripheral device if

the personal digital assistant is not connected to any peripheral devices by sending a second signal to the computer; sending the first signal to the computer wherein the first signal is compliant with a universal serial bus standard; sending the second signal to the computer, wherein the second signal is compliant with a universal serial bus standard; and at least one of charge and power appropriate for a represented one peripheral device connected to the hub in response to the first and second signals, from the computer (Fig.1-7, and col.5 line 15 to col.8 line 29).

3. Regarding claim 22 Bork teach and describe a system for at least one of charging and powering a personal digital assistant, the system comprising:

a connector for connecting the personal digital assistant to the computer comprising a universal serial bus hub driver, the connector comprising a cable having a universal serial bus compliant plug and port combination;

a software module in the personal digital assistant comprising a first signal module configured to represent the personal digital assistant to the computer as a hub instead of as a personal digital assistant to draw at least one of charged and powered from the computer by sending a first signal to the computer, and a second signal module configured to represent the personal digital assistant to the computer as the hub being connected to one peripheral device if the personal digital assistant is not connected to any peripheral devices by sending a second signal to the computer; and a power-charge receptor in the personal digital assistant for receiving at least one of charge and power appropriate for a represented one peripheral device connected to

the hub in response to the first and second signals, from the computer (Fig.1-17, and col.5 line 15 to col.8 line 29).

4. Claims 7, and 28 are rejected applied as above in rejecting claims 1, and 22. Furthermore, Bork teach and describe a system and method for powering peripheral device: wherein:

As per Claims 7, and 28, the universal serial bus hub driver is a WindowsTM based hub driver that complies the universal bus standard (col.5 line 15 to col.6 line 26).
